

PublicnEUro upload instructions

A – Registration

Someone from PublicnEUro has to register you on the platform using both your work email and your personal cell phone number.

Upon registration you will receive an email from Computerome (<https://www.computerome.dk/>) our subcontractor and you will have to set a password. Logging however requires 2 authentication factor and this why we need your cell phone, from which you should receive a 2nd password, each time you login (one time password usage).

B – issue with One-Time-Password

Each time to login to computerome you should receive a OTP via text message. With some countries/cell providers, it does not work. In such case, you will have to download and install the Entrust Identity app which will deliver OTP instead. Instructions for using the app can be found here: <https://www.computerome.dk/wiki/two-factor-authentication-2fa>

C – Uploading data

1. Connect to <https://www.computerome.dk/> and login

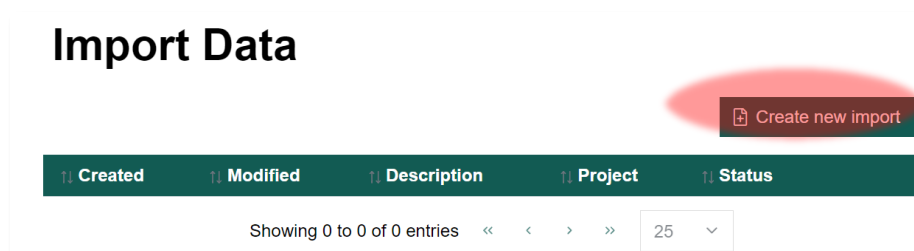

2. Click on My solutions

3. You can then select to import data into DELPHI

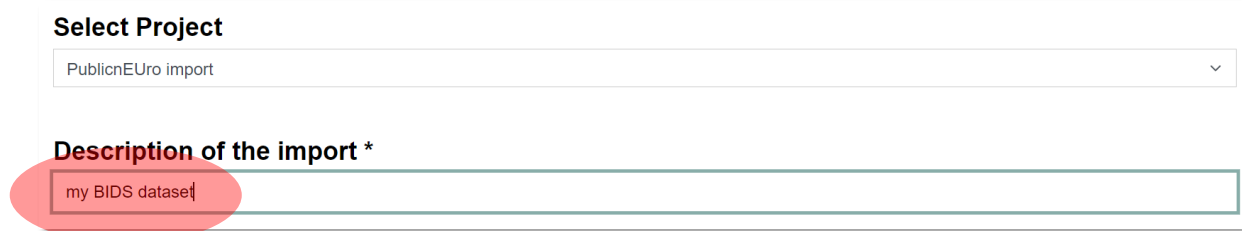

4. Create a new import

There should only one project available to you – PublicnEUro import

Use the same name as in the contract (this can be change since this is just a staging area but it is just simpler to identify your dataset)

Select Project

PublicnEUro import

Description of the import *

my BIDS dataset

5. You can then import and archive (i.e. zip, gzip, tar your BIDS dataset)

IMPORTANT: remember that you **MUST** have a data user agreement (EU countries) or licence files. The data user agreement **MUST** be aligned with the contract signed between you and PublicnEUro.

Select files

Select Upload Cancel

OpenNeuroPET-Phantoms.zip

D – Issues

For issues for connecting/logging raise a ticket to computerome@dtu.dk

Any other issue, email your PublicnEUro contact person.
